

BASE DE DATOS (DBMS)

1. Client Interface

- Drivers (JDBC, ODBC, Mongo Driver, etc)
- Protocolos (TCP, TLS)
- Autenticación inicial

2. Query Layer

Parser

- Lexical analysis
- Syntax tree (AST)

Validator

- Schema validation
- Permissions
- Type checking

Query Optimizer

- Cost-based optimizer
- Statistics
- Index selection
- Execution plan

Execution Engine

- Operators (scan, join, filter)
- Pipeline execution
- Result materialization

3. Transaction Manager

Transaction lifecycle

- BEGIN
- COMMIT
- ROLLBACK

Isolation control

- MVCC
- Locks
- Snapshots

Concurrency control

- Deadlock detection
- Conflict resolution

4. Storage Engine

Data organization

- Pages / Blocks
- Segments
- Tablespaces / Collections

Index Manager

- B-Tree
- Hash indexes
- LSM Trees
- Compound / Partial indexes
